Data-driven problem solver with experience translating technical analysis into business decisions, cross-functional collaboration, and stakeholder communication.

Experiences

Accenture Southeast Asia - Central Jakarta, Jakarta
Technology & Consulting Intern **Jan 2026 - Sep 2026**

- Validated production reliability across 3 interconnected microservice domains (order fulfillment & provisioning, an integration/middleware layer handling request routing and payload transformation, and an orchestration layer between the sales/channel and fulfillment systems) supporting a telecommunications provider serving 50M+ subscribers, within an 880+ issue delivery pipeline, catching 20+ critical pre-production defects via systematic API contract testing against JSON schema specs.
- Independently diagnosed root-cause failures in containerized services by parsing logs in OpenShift and correlating live test results against API specifications.
- Ensured data integrity across fulfillment and account management workflows using SQL-based validation, coordinating defect resolution under Agile sprint cadence.

PT. Bank Syariah Indonesia - Central Jakarta, Jakarta
Data Analyst Intern – Collections Strategy & Performance Team **Jul 2025 - Sep 2025**

- Automated cleaning and feature extraction across 2M+ repayment records in Python, cutting processing time by 70% and surfacing delinquency patterns that directly informed collections strategy decisions.
- Built a repayment behavior analysis pipeline correlating contact frequency with payment outcomes, producing contact-timing recommendations that contributed to a reported 12% improvement in collections efficiency.

Intelligent Computation & Vision Laboratory - Sepuluh Nopember Institute of Technology, Surabaya
Assistant Researcher **Feb 2025 - Present**

- Published and presented a Teacher–Student Knowledge Distillation framework at ICTS 2025 (DOI:10.1109/ICTS67612.2025.11369518) that compressed a vision model to 2.23M parameters while maintaining 95.64% accuracy, enabling low-power, real-time deployment for agricultural field environments with no GPU access.
- Designed and benchmarked efficient neural architectures in PyTorch, evaluating accuracy–latency–memory tradeoffs against SOTA baselines to identify optimal compression configurations for edge deployment.

Intelligent Computation & Vision Laboratory - Sepuluh Nopember Institute of Technology, Surabaya
Laboratory Administrator **May 2024 - Aug 2026**

- Organized introductory machine learning workshops for freshmen, covering essential topics such as regression, classification, clustering, and their practical applications. Utilized hands-on programming exercises to reinforce understanding and foster technical skills in students.

Education

Institut Teknologi Sepuluh Nopember - Surabaya, Indonesia
Bachelor of Informatics Engineering, 3.61/4.00 **Jul 2022 - Aug 2026**

Research Interests: Resource-Efficient AI, Computer Vision for Sustainability, AI for Social Impact.

Recent Projects

TanyaRasa: Indonesian Mental Health Chatbot with Fine-Tuned IndoBERT **PREVIEW**
Built an end-to-end NLP intent-classification pipeline for an Indonesian-language mental health chatbot: collected, translated, cleaned, and labeled conversational text data, then fine-tuned IndoBERT for intent classification, achieving 85.35% accuracy and 84.59% F1-score. Benchmarked against a generative baseline (CENDOL) and deployed the model via Streamlit and Hugging Face.

Digital Lung Stethoscope with CNN and Knowledge Distillation for Respiratory Disease Detection **PREVIEW**
Engineered an end-to-end signal-processing and deep learning pipeline deployed on Raspberry Pi hardware, enabling low-cost real-time diagnosis in resource-limited clinics. This work was recognized with an Honorable Mention at GEMASTIK XVIII 2025 (The Ministry of Education, Culture, Research and Technology) for scientific writing and innovation.

Knowledge Distillation for Efficient Ordinal Classification of Oil Palm Ripeness Level **PREVIEW**
Built a compressed AI model to optimize harvest timing decisions, supporting sustainable agricultural practices with field-deployable, low-power hardware.

Technical Skills

Analytics & Data - Python, SQL, Excel, Scikit-learn, Statistical Modeling, Data Cleaning & Pipeline Automation, TensorFlow, PyTorch, HuggingFace

Professional - Cross-functional collaboration, Agile delivery, stakeholder communication, problem structuring.

Achievements

Honorable Mention of ICT Scientific Writing Division at GEMASTIK XVIII 2025 - Top 4 of 386 teams
Issued by The Ministry of Education, Culture, Research and Technology (MoECRT) **Oct 2025**
Awarded for the innovation of the "Digital Lung Stethoscope with CNN and Knowledge Distillation for Respiratory Disease Detection" research.

3rd Place of Presentation Event Formula SAE Japan 2024 - Top 3 of 75 teams
Issued by Formula Society of Automotive Engineers **Sep 2024**
Translated financial metrics and marketing strategy into visuals for an international panel presentation.

Top 10 Team at VWO UI 2023 UI/UX Competition
Issued by University of Indonesia Vocational Student Executive Board **Nov 2023**
Led user research and interface design for a regional language-learning app.

3rd Place of Presentation Event Formula SAE Japan 2023 - Top 3 of 77 teams
Issued by Formula Society of Automotive Engineers **Sep 2023**
Designed a business plan presentation using data storytelling to communicate key insights using digital transformation strategies.

Most Innovative Paper at Youth Idea Competition NBRI 2023
Issued by National Battery Research Institute **Aug 2023**
Conducted predictive analysis of EV charging infrastructure in Indonesia, optimizing charging station placement based on user behavior and energy demand patterns.

1st Place of Overall Event of Formula Bharat Pi-EV
Issued by Formula Bharat India **Jul 2023**
Transformed EV engineering data into an award-winning presentation.
